Steve-

To follow up on our Wednesday meeting, I wanted to send this email to confirm our cleanup goal of 2 picocuries/gram. This goal will be worked into the action memo which is being prepared right now. It is our understanding that you feel this goal falls within the bell-shaped curve of background concentrations and is protective of human health and the environment. There will also be some language about removing gross contamination (entire dials, buttons, shards, etc...) in the RAOs. If you have any questions regarding this, or the survey we are going to conduct, please feel free to contact me. --Ryan
